

The Company

Air Conditioning Products Group (ACP GROUP) was founded in 1987 and has since become one of the UK'S leading INDEPENDENT automotive air conditioning specialists.

SERVICE & REPAIR EQUIPMENT

We innovate and work with many equipment manufacturers to produce, improve and deliver world class equipment that today's automotive engineer deserves.

All our equipment is cherry picked for it is our belief they are the best available, taking technical attributes, quality, durability, reliability in the field and price into consideration.

We are not tied to any one manufacturer.

TRAINING

We have trained vehicle (on and off road) manufacturer's engineers as well as main agent, body shop, plant, agricultural, commercial vehicle, independent garage and many individuals to achieve their aspirations to work safely and with the best knowledge available.

The help we supplied to the above for setting up in-house or their own successful businesses carrying out vehicle air conditioning service and repair has been instrumental to their success.

Our training and technical support has also helped many companies and individuals who had already been trained and purchased equipment, get fully trained and utilize their equipment.

Course development of training allows us to offer far more course content than any other short course available in the market place today. It allows us to offer one or two certificates from either of the awarding bodies IMI or City & Guilds. We supply a full manual, diagnostic flow chart and check sheet to allow the training time to be spent being trained. Not making notes!

This has been the most instrumental part of our learner's success as it provides reference and confidence when first starting and working in the field. It also assists in the easy flow from learner to professional.

CITB. Safe Handling of Refrigerant.

This course is a must for personnel working with refrigerants and is recognized as the standard for which personnel in the Air Conditioning and Refrigeration industry aspire.

DOMESTIC & LIGHT COMMERCIAL AIR CONDITIONING INSTALLATION

This year will see the introduction of the above course and will be a hands on course where learners will actually fit an Air Conditioning unit which will be a first in this industry sector.

FACILITIES

The company's lecturer has 28 years experience in the motor trade covering sales, workshop, parts and reception. When not teaching he continues to work on vehicle air conditioning systems and is very hands on.

ACP Group's training centre has state of the art technology and the most up to date tools & equipment for learners to use. It includes a test rig that can simulate the faults engineers will encounter out in the field such as blocked expansion valve, blocked filter drier, over condensing, faulty compressor and poor air flow over evaporator.

TECHNICAL SUPPORT

Due to our unique method of training and our supplying of a vehicle air conditioning service and repair manual, diagnostic flow chart and check sheet our technical support is rarely utilized.

However we supply full technical back up if required and also sponsor an Air Conditioning forum on www.ukautotalk.com

COMMITMENT

We are committed to manufacturers, garages, body shops, mobile engineers, agricultural repairers, plant maintenance companies, auto electricians and commercial vehicle repairers in helping them to capitalize on the growing Vehicle Air Conditioning market by avoiding the pitfalls of

1. Buying overpriced equipment and consumables
2. Buying equipment that never gets used
3. Getting the most from equipment purchased
4. Knowing available equipment to profit from associated work
5. Training of workshop staff, allowing them to carry out work proficiently and with enthusiasm.

Training for workshop staff to cover the 3 grey areas of vehicle A/C

1. Finding leaks and proving there are no other leaks on system (were practical)
2. How much oil is in the system
3. Covering your investment when a new compressor is fitted

Training on law

1. Environmental Protection Act 1990 (EPA 1990) sections 33 & 34
2. COSHH regulations. Legal duty of employers and employees regarding A/C refrigerants and oils

Training of owners, general managers, service managers, reception and parts staff in A/C terminology. Understanding the 2 basic A/C systems and components. Enabling learners to quickly identify parts and converse with clients proficiently regarding their A/C system.

THIS CATALOGUE

This catalogue has been produced with the new client and professional service engineer in mind.

Should you require any product that you cannot find in this catalogue please do not hesitate to contact us and we will do our best to source it for you.

All price's correct at time of going to press. E&OE

No part of this catalogue may be copied, stored or transmitted in any form without the prior written permission of Air Conditioning Products Group.
